# **Scales**

The Home scale sought to understand the current housing conditions in the settlements, and to imagine with residents what upgraded housing could be like. The aim was to explore a definition of 'home' and to capture residents' diverse values and aspirations for this important component of the settlement.

The Community scale focused on community dynamics in relation to community spaces (streets, community amenity spaces and surrounding areas) and infrastructures (transport, water, sanitation, energy, information).

The city scale focused on citywide processes, conditions and experiences. Activities included the exploration of spaces in the city that are relevant to the lives of residents, spanning issues of transport, public services and livelihood opportunities.

The Policy and Planning scale explored current planning policy as well as emerging planning policy and its implications. The process included a stakeholder analysis and discusses where a Community Action Area Plan could fit into the current policy framework for Freetown.

## Community Action Area Plan (CAAP) Process and Methods (Leaflet 1 of 3)

This leaflet describes the participatory process and methods used to produce Community Action Area Plans in Freetown. This project is an opportunity to create a community-level action plan that considers the needs and aspirations of people living in informal settlements, so they can be included in city-wide visions and advocate their rights to a more just and inclusive city.

The CAAP is an instrument that aims to:

- · Support communities to advocate their rights to a more just and inclusive city.
- Provide a decision-making tool to help communities plan for future interventions. Provide a framework for testing different scenarios for settlement upgrading.
- Provide a framework to explore and assess different organisational structures and funding mechanisms that will support change.
- Support local and central government to further understand the needs and aspirations of residents living in informal settlements, helping to plan realistic and equitable interventions.

STAGES	DIAGNOSIS	DREAMING	DEVELOPIN
	_	L	L

### Diagnosis

This stage is designed to uncover the current conditions at each scale. The aim is to develop a holistic understanding of the situation in the settlement and reflect on opportunities for change.

### Dreaming

This stage is designed to uncover residents' aspirations for improving their living standards, the wider settlement and experience of the city. The aims of these activities is to facilitate discussions around physical improvements but also explore ecomomic, social, political and cultual changes.

### Developing

This stage is designed to capture the aspirations identified in the dreaming stage into a range of options and principles. These are used in action planning activities in which residents explore different scenarios for future development.

#### DEFINING

#### COMMUNITY ACTION AREA PLAN:

PRINCIPLES OPTIONS **DESIGN GUIDE DESIGN VISION** 

#### Defining

The final stage is designed to capture the process and outcomes in a series of community planning documents. Residents and the steering group were engaged to ensure the outcomes reflected the community needs.
